Here the electricity is seemingly evolved by pressure from the cushion; the mass electricity of the earth ascending by the connecting chain on each temporary removal of pressure, to supply the place of that evolved from the cushion; the electricity so evolved being carried round in an insulated state between the glass cylinder and the silk covering, (both non-conductors) until attracted by the iron points of the conductors into the insulating jar. ThTs filling of the jar with electricity seems in fact a similar process to that of filling a receiver with condensed air by means of the forcing pump: the escape of electricity during its progress to the jar being as effectually prevented by the non-conductors it passes between, as the escape of the air is prevented by means of the pump valve. galvanism. Here the electro-magnetism arising from the...
